

Cybersecurity Awareness Chatbot (CyberBot)

Presented by Liyanda Tonisi

```
> boot cyberbot --awareness
[OK] knowledge base online
[READY] ask a security question_
```

Threats move fast. Awareness fades faster.

Traditional training

Long sessions. Dense slides. Low recall.

Everyday exposure

PHISHING / RANSOMWARE / MALWARE
WEAK PASSWORDS / PUBLIC WI-FI

Short answers. Safer decisions.

CyberBot is an interactive Java console app that delivers practical cybersecurity advice in plain language—without assuming a technical background.

CONVERSATIONAL

VOICE-ENABLED

OOP DESIGN

```
$ java -jar cyberbot.jar
```

```
CYBERBOT > Hi Liyanda. What can I help you secure today?
```

```
YOU > How do I spot a phishing email?
```

```
CYBERBOT > Check urgency, sender details and unexpected links.
```

A terminal that feels welcoming.

))))))))))))))

```
┌── CYBERBOT ──┐  
[voice] Welcome – let's stay secure.
```

```
> help  
  phishing    passwords    wifi  
  updates    malware    backup  
  
> _
```

Guided prompts · Dynamic help · Asynchronous greeting

Local first. AI when needed.

Fast, varied local answers handle common topics. Niche questions fall back to Gemini 2.5 Flash; errors degrade gracefully, and approved responses can enrich the local knowledge base.

Built with proven tools.

JAVA 17+

Separated concerns. Clear ownership.

ENTRY

CONVERSATION

KNOWLEDGE

INTERFACE + SERVICES

Personality on the surface. Resilience underneath.

ASCII + ANSI
Distinct terminal identity

VOICE GREETING
Approachable startup

LOCAL KNOWLEDGE
Varied security advice

DYNAMIC HELP
Guidance on demand

AI FALLBACK
Extended answers

SAFE COMMANDS
exit · quit · q

From clone to conversation.

01 CLONE REPO

02 SET API KEY

03 MVN BUILD

04 RUN

REQUIRES

Java Development Kit 17+

Apache Maven 3.6+

Optional Gemini API key

SUPPORTED

Pop!_OS · Ubuntu/Debian · macOS

Modern Windows terminals

One command to run. One suite to trust.

```
$ mvn compile exec:java \  
  -Dexec.mainClass=Main \  
  -Djansi.passthrough=true \  
  --enable-native-access=ALL-UNNAMED
```

TEST REPORT

Chatbot behaviour	PASS
Knowledge base	PASS
Input validation	PASS

BUILD SUCCESS 0 failures

Graceful degradation is a feature.

**NO VOICE? NO AI?
CYBERBOT STILL WORKS.**

```
[WARN] FreeTTS may emit warnings on JDK 17+  
      → voice falls back silently  
  
[WARN] ANSI rendering varies by terminal  
      → legacy Windows consoles may differ  
  
[ OK ] Core chat remains functional without  
      voice synthesis or AI fallback
```

Learn the habits that reduce risk.

01 SPOT THE BAIT

Phishing, social engineering and suspicious urgency.

02 PROTECT ACCESS

Passwords, credentials and two-factor authentication.

03 SECURE THE PATH

Firewalls, VPN safety and software updates.

04 RECOVER WELL

Malware, ransomware, public Wi-Fi and backups.

Secure learning, one conversation at a time.

ACCESSIBLE ADVICE / MAINTAINABLE OOP / RESILIENT FALLBACKS / TESTED BEHAVIOUR

GPL-3.0 · OPEN COLLABORATION

Thank you for your time.
